

Quick Startup Guide

School Administrator Portal

Your first actions after login

A short, practical guide for getting a school ready for daily use.

If you do not have time to read the full manual, start here. Complete the steps in order, then use the full manual when you need detailed guidance.

Quick contents

No.	First-login action
1	Confirm school identity and active term
2	Create classes before learners
3	Add teachers, subjects, and assignments
4	Add learners or run a small bulk-import test
5	Create the first assessment
6	Configure timetable and activities
7	Enter, review, and publish results
8	Secure accounts and verify communication

The golden rule

Set up the structure first, then enter people, then create assessments, then enter results. Do not begin with marks before classes, learners, subjects, and the active term are correct.

Default password guidance

Use these role-based starter passwords only when creating initial accounts. Each user must receive an individual login account, and every password must be changed immediately after first login.

Role	Default password or pattern
School Admin	SchoolAdmin@2025
Teacher / Class Teacher	Teacher@2025
Parent	Parent@2025
Student	<ADMISSION_NUMBER>@2025

Login emails are created individually by the school or generated during learner setup and bulk import. After results are published by the School Admin, parents and students can sign in to their own portals to view the results available to them.

Never publish real login emails, shared account credentials, OTPs, API keys, or reseller credentials in a public brochure or group chat.

1 First-login checklist

Use this page as your first-day checklist. Tick each action after you have verified it in the portal.

1 Confirm the school identity and active term

Open the administrator dashboard and check the school name, logo, contact details, and branding. Open the term or school-settings area and confirm the active academic year, active term, and next-term start date. These values appear in reports and report cards.

2 Create all classes before adding learners

Open Grades or Classes and create every class and stream the school uses, including PP1, PP2, primary grades, and junior-school grades. Check spelling and stream labels. Assign class teachers where needed.

3 Add teachers and learning areas

Create teacher profiles and assign each teacher to the correct classes and learning areas. Teacher assignments control which marks a teacher can enter and which lessons appear in their timetable.

4 Add learners and test accounts

Add a small sample of learners first. Confirm names, admission numbers, class, gender, parent contact, learner account, and parent link. For a bulk CSV import, test a few rows before uploading a whole grade.

5 Create the first assessment

Create the assessment for the correct term and academic year. Choose its type, dates, scope, and weightage. Confirm that the intended teachers can see it before entering marks.

6 Configure the timetable

Set lessons per day, lunch, breaks, activity blocks, and teacher assignment priorities. Use priority morning for lessons 1–3, priority mid-morning for lessons 4–6, and afternoon for lesson 7 onward. Add fixed activities such as Friday PPI before generating.

7 Enter, review, and publish results

Enter a small set of marks and check the results view. Review missing marks, averages, rankings, comments, photos, and a sample report card. Only the school administrator should use Publish & Notify after the review is complete.

8 Secure the school and verify communication

Make sure every user has an individual account and changes any temporary password. Verify the configured SMS provider before promising results notifications or phone password reset. Never publish passwords or OTPs in a document or group chat.

2 Your first working day

After completing the first-login checklist, use this order for your first real operational day.

2.1 Morning setup

Time	Administrator action
Before teaching	Confirm timetable publication, teacher assignments, fixed activities, and any room or availability restrictions.
During entry	Monitor learners, teachers, class records, and support requests. Correct structure errors before they spread.
Before results	Check that every assessment, learning area, learner, and mark is attached to the correct class and term.
Before publication	Generate a sample report card and verify layout, names, photos, grades, comments, and next-term information.
After publication	Check that the publication status is correct and inspect the notification result returned by the configured SMS provider.

2.2 Five checks before you leave the page

Check 1 — Classes

All classes and streams exist and have clear names.

Check 2 — Learners

Sample learner profiles show the correct class, admission number, and parent link.

Check 3 — Teachers

Subjects and learning areas are assigned to the correct teachers.

Check 4 — Results

Marks, missing-mark status, averages, and rankings match the selected term and assessment.

Check 5 — Security

No shared credentials, exposed passwords, or public OTPs are being used.

2.3 If something looks wrong

Problem	First action
A class is missing	Create the class before adding or importing learners.
A teacher sees the wrong subject	Review the teacher-learning-area assignment.
Bulk import fails	Check class names, CSV headings, unique admission numbers, and blank rows; retry with a small sample.
Timetable is crowded	Check lesson counts, lunch, activities, teacher availability, and priority bands.
Report card looks wrong	Generate one sample, inspect it at 100%, and correct marks or configuration before bulk export.
SMS says sent but no one receives it	Check the provider's response body, not only HTTP status, and verify the provider credential and balance.

3 Quick security reference

Never include these in a brochure or group chat

Live login emails, passwords, reseller credentials, API keys, payment secrets, SMS tokens, service-role keys, and password-reset OTPs.

Administrator's 60-second close-out

1. Confirm the school, term, classes, and learners.
2. Confirm teacher assignments and assessments.
3. Review a sample result and report card.
4. Publish only when marks are complete.
5. Check communication-provider feedback.
6. Keep every account and document secure.
